Various modes used in SharedPreferences

S.No	Mode and Description
1.	MODE_APPEND This will append the new preferences with the already existing preferences.
2.	MODE_ENABLE_WRITE_AHEAD_LOGGING When this mode is used, every database operation will be kept in the log.
3.	MODE_MULTI_PROCESS This method will check for modification of preferences even if the sharedpreference instance has already been loaded.
4.	MODE_PRIVATE By setting this mode, the file can only be accessed by the calling application.
5.	MODE_WORLD_READABLE This mode allows other applications to read the preferences.
6.	MODE_WORLD_WRITEABLE This mode allows other applications to write the preferences.
